

**Editor's Comment:**

With reference to our previous correspondence, I send as an attachment the checked manuscript entitled **"Sustainable production of cabbage using different irrigation levels and fertilizer types affecting some soil chemical characteristics"** (2015 AJEA 17590). The scientific quality of the manuscript is very good. However, before acceptance this manuscript for publication in AJEA some technical amendments are needed. The manuscript should be prepared in a manner consistent with the instructions for authors of AJEA (Please see SDI paper template). Moreover, some data are presented twice (Table 8 and Fig. 2). I suggest to remove Fig. 2. Please see also my remarks in the attached manuscript.
