

Reviewer Comment:

I have checked the whole manuscript. The title of the manuscript is: Yield Stability of Newly-Released Wheat Varieties Evaluated in Multi-Environmental Trials in Bangladesh". In that research, varieties were evaluated on the basis of environment. So, environmental factors/data/information was the most important one. But, author(s) did not add it. Kindly request to authors to add locations wise data like temperature (max., min., and mean data), rainfall, sunshine hr and relative humidity.
