

AUTHORS CORRECTIONS IN REGARD OF THE MANUSCRIPT NUMBER 2912/IJTDH/2479

Line 135-139: The effect of using the T-test is overstated compared to the relevance of the test in this respect. Software used to analyze data is incorporated in line 138 of the revised manuscript.

Line 143-145: With regarding to information on whether respondents had ever suffered from schistosomiasis, that is already covered in Salehe et al (2012) entitled: "Schistosomiasis : A comparative study of its socio-economic consequences in different types of irrigation schemes in Tanzania". Page 243

Information on whether respondents had received health education from anywhere else has been incorporated in lines 219-226 of the revised manuscript.

Percentages presented in Table 3 are the reflection of farmers' knowledge of schistosomiasis in different schemes as gathered in this study, and farmers differences in schistosomiasis knowledge expressed in table 4 are statistically significant.

Lines 170-194: Corrected in lines 237-260.

Lines 196-200: While we have explained the items with significant statistical values, we have equally presented and referred the rest in tables, and that is normal.

Lines 207-213: Ideas incorporated (see lines 243-248 of the revised manuscript).

Lines 224-233: Observation noted, see lines 131-133 and Table 2 of the revised manuscript.
