SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The paper investigates the effect of alcohol consumption on some haematological and haemostatic 3 parameters among consumers in Birnin Kebbi, Kebbi State, Nigeria. It is an interesting study which deserves publication to my opinion. However, there are some points that should be addressed prior final consideration for publication. Specifically: l.139-144. Which test was used to identify significant ($p < 0.05$) differences among mean values? e.g. t-test, Duncan's test, etc? Please specify. l. 142. P value should be < 0.05 for significant differences, not > 0.05. Please correct.	Yes we agree with the reviewer's comment and we have made all the revisions suggested and indicated them in yellow colour in the text.
<u>Minor</u> REVISION comments	l. 6. "...with a significant...". Please delete "a". l. 65-66. I do not understand this sentence. Please rephrase. l. 208 "...in other..." should be corrected to "...in order..."	
<u>Optional/General</u> comments
