

Manuscript number: 2013/IJTDH/6048

Manuscript title: Seroprevalence of Herpes Simplex Virus Infections among Pregnant Women attending Antenatal Clinic in Benin, Nigeria

Author details:

Kalu, Eziyi Iche (MBBS, FWACP)

Department of Medical Microbiology, Federal Medical Centre, Umuahia. Abia State, Nigeria

Minor revision :

1. Line 90 : inform concern should be write in new line and has been repeated in line 362 (Ethical consideration).
2. Line 186, 189, 190 : TABLE 1 should be deleted and in line 194 is enough and not CAPS font.
3. The font of Tables are not consistence; sometime CAPS font and other smallcaps.
4. In references : no need “available from URL :”
5. All of them : need more type set correction carefully before publish (space, font, paragraph, ect).

Response to Editorial Review

Thank you for highlighting those inconsistencies in the 1st revision of the Manuscript. Modifications have been effected in this attached 2nd revision, as follows:

1. The statement on informed consent in line 90 has been written in a new line. The repeated consent statement in line 362 has been deleted.
2. The tag “TABLE 1” in lines 186,189,and 190 have been deleted. The tag in line 194 has been re-rendered in Title case. All similar table-citing tags in the “Results” section have been modified accordingly to reduce redundancy.
3. Upper case has been consistently maintained in all the tables
4. The recommended modification in aspects of units of “Reference list” containing “available from URL :” have been effected.
5. All detected type-setting inconsistencies in the entire write-up have been modified. Single line spacing is maintained.
