SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This is an interesting case report article about the Strongyloides stercoralis hyperinfection in renal transplant patients that diagnosed by endoscopic intestinal biopsy. Strongyloides stercoralis is an intestinal nematode that the infection of this parasite is very important special in immunodeficiency patients and people that who used immunosuppressive drugs.	
<u>Minor</u> REVISION comments	This paper is written in good English but have limited problem that should be reformed before publication. 1. Why the authors don't use of Baerman or Harada mori methods for detection of Strongyloides stercoralis larva in stool and used endoscopy only after routine stool examination? 2. Do the authors use endoscopy or sensitive parasitological methods for follow up the infection and conformation of efficacy for Ivermectin. 3. In page 3, line 77, the reference should be added after "effect". 4. In page 3, line 83, the word of "cysts" should be eliminated, because the text and details is related to Strongyloides stercoralis.	
<u>Optional/General</u> comments	However, this is suitable and good article for publication in this journal after minor revision. I hope my suggestions are helpful to you.
