SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Please include duration between stroke and AE intervention as it is important as early exercise may harm patients and exercise too late after stroke may not benefit. Please state if there is any correlation between the duration between stroke and AE, and improvement in outcomes measured. What was degree of deficits in stroke patients? Table on this may be helpful.	Duration of stroke before intervention was not considered as we only used those ascertained to be stroke patients. Because of the reason given above, we did not work on degree of deficits of the patients.
<u>Optional/General</u> comments
