SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The biggest challenge when writing a review is to cover the broad spectrum of knowledge regarding topic selected. In this case the leishmaniasis therapeutic armamentarium available. It is the main purpose of the present manuscript, however this review is incomplete. For instance, immunotherapeutic approach is not included. Although "drugs in the market" historical data review is quite well (but available in the literature and well known), information is not updated. I highly recommend the authors to focus on new therapeutic approaches against leishmaniasis instead of once more re-review data published in extent.	For some reason, the file was unformatted, to which we apologize. We give attention to this in the new document formatting. The manuscript was also completely revised by a native, as suggested by one of the reviewers. These changes are highlighted in yellow . Regarding the comments, thank you for your time. In order to meet the requests of all reviewers (most of the reviewers considered the current information as important), the topics have been kept, but they were updated according to the comments of each reviewer. The immunotherapeutic approach was not included because the immunity against <i>Leishmania</i> parasites is mediated through complex immune parameters, which would have to be discussed. The manuscript would be much longer.
Minor REVISION comments		
Optional/General comments
