SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. The style of referencing should be used i.e. If APA use all authors for the first time, then for successive use et al or just number your sources of information 2. Describe somewhere the word destigmatization 3. Stigma and missed meds or adherence was measured by several studies and it maybe proper to use those to add to your information. The publications have been included for you to add on your information in your article 4. Your discussion of results is not specific and is not supported or related to other authors. Bring out the quantitative summary of your results in the discussion and conclusions 5. Check for proper sentencing and writing correct sentences 6. Avoid the use of "we" or "I" refer to this paper or in this study etc	The paper was knowingly submitted in the wrong format after requesting a speedy submission from the editor. This is corrected. Destigmatization is defined. We have added more literature to our outline and to the conclusion to link our work to the literature more clearly. We have clarified our results in the discussion especially with the adding of new literature. We have redrafted the entire text to ensure better sentence construction. We have used the passive voice throughout the paper.
<u>Minor</u> REVISION comments		

SDI Review Form 1.6

<u>Optional/General</u> comments	It would be proper to add a little bit on how privacy was maintained when collecting data, especially for the interviews seeing that this is a very sensitive topic	We have done this in the methods section and in the consent and ethics statements at the end of the paper.
