SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The subject of the review is very important and related to the role of the thymus in physiological and stress conditions, which in fact, result from not only persistence of pathogens, but other factors also, such as environmental, psychosocial, aging. Indeed, the thymus is able to sense stress hormones in pathological condition and in physiological also under the regulation of the HPA-axis. The style of the review is clear and concise. In my opinion the manuscript can be accepted as it is in term of the matter. Minor corrections should be done as reported below.	
<u>Minor</u> REVISION comments	Some minor corrections should be inserted in the Figure 1: Hypothalamus (not hipothalamus); ACTH (not ACRH).	The suggested corrections were done in the revised version of the manuscript.
<u>Optional/General</u> comments	I am not an expert in English that is why I do not make comments related to the grammar or style of English.
