SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The treatment is not also properly discussed in the text. I wonder that patient got no antifungal treatment although it was found by pleural punction.	The laboratory scientist reported that
<u>Minor</u> REVISION comments	Few grammar mistakes. No lung biopsy with microscopy was presented in the case. No immunoferment analysis against TB was not also present (?)	The Basic policy in terms of diagnosis of TB in developing countries, does not depend on Culture so, The Who programme for Rolling DOT in resource poor setting requires clinical History, Smear test. Patient referral to cardiothoracic Unit was for chest tube insertion but before a second, X-ray film was made be available, he had improved greatly. A follow-up for home visit was made few months later, he was involved in his usual home business. These are investigation that only can be available in advance laboratory. Not in most developing nation, such as where this case was seen.
<u>Optional/General</u> comments	From my point of view the conclusion does not reflect the idea of the case.	Conclusion has been reviewed
