SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The idea of knowing the microbial resistance pattern of the species is very important but the paper doesn't have strong evidence why this evidence is needed in that location. Are there problems related to these species of salmonella species causing diseases in the location? This should be good evidence because it will make the paper usable for local decision-making.	I'm agree. The salmonellosis in Côte d'Ivoire is known to be a public health problem specially in the precarious neighbourhoods. The sewers of the university hospital meet those of the campus. Since the beginning of social crisis in Côte d'Ivoire, Cocody campus is became a precarious area with the incoming of lot of people and the development of wastewater inside. So we decided to study the wastewater of this location like a first step of a big plan.
<u>Minor</u> REVISION comments	An English-speaking editor should revise some of the English.	
<u>Optional/General</u> comments
