Subject: RE: Request for editorial decision for manuscript number 2014_IJTDH_11803

The manuscript entitled "Comparative Study between Molecular and Different Diagnostic Methods of Schistosoma haematobium Gezira State Sudan,"

Was poorly written. However, there was so much dedication in data collection. In the manuscript many careless professional errors were made.

(1) This reviewer prefers that they write out "it is" line 33. (2) The urine was examined by filtration method [10] is completely meaningless in scientific review of the literature. Primer was selected by [21] is also meaningless [4] Line 112 involves poor or inappropriate English construction of a sentence- "controls was done..."

Line 116 and 117 should be revised, the sentence is incomplete.

Lines 182 through 186 contain grammatical errors that should be revised. Line 189 has Mahgoub et al it should be followed by the reference [25]

This type of error occurred in lines 225, 232 and 235

The results section where the authors provided p-values should be accompanied with the specific test statistics so that the reviewers can recalculate their values to ensure the precision/accuracy of their computations.

This manuscript should not be published until the authors revise and correct their multiple errors.
