- This form has total 7 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The manuscript of Alex et al. shows that in Ghanaians patients with Type 2 diabetes mellitus there is no significant association between serum lipids and diabetic retinopathy. Comments to the manuscript are: 1) The study is well designed, well performed and well written. There is however a point to be solved, in order to confirm that the association between serum lipids and diabetic retinopathy is lacking the three groups of patients considered (diabetic patients without retinopathy, with non proliferative retinopathy and with proliferative retinopathy) should be matched for age, gender and duration of diabetes. The confounding effect obtained by the simultaneous presence of unbalanced gender distribution and significantly younger age of patients without retinopathy cannot be accounted for by any mathematical adjustment.	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
