SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	None	
<u>Minor</u> REVISION comments	If such data are available, it could be of interest to know the satisfaction of adherent patients with the medical services provided. A comparison of satisfaction between adherent and non-adherent patients should give some interesting information. Overall, the article is very interesting. Words of patients reported in the study give very instructive information. I am slightly disappointing by the discussion that appears relatively short. The discussion about the three main obstacles to adherence (to be away from home, to be busy by other things, to simply forget) should have merited greater analysis. In particular, the article could be improved if authors could detail solutions suggested by the authors.	
<u>Optional/General</u> comments
