

Awareness and knowledge of HIV counseling and testing among undergraduates ----

Line – 92 – is it qualitative or quantitative that you mean?

Method – describe in details and chronologically how the sampling(s) were done – random, multistage etc

How was the questionnaire distributed and by whom?

Give a good description of Lagos state university especially population and population distribution

How was the sample size determined?

I feel 200 subjects is too small for this study

Result

Characteristics of subjects –verbose. You are not assessing the differences in knowledge between male and female students. Just give the age range of the subjects and sex distribution only

Line 134 – sources of information instead of sources of awareness

Line 143 – 154 – please give only the absolute figures/ results not explanation. Explanation should be done in the discussion section.

Discussion

This has to be re-written. Did not actually address the aim. Discuss the general results that reflect the aim and object of the study first before specificities. Since gender difference was not significant it does not require to be in the opening paragraph and give as much emphasis as you did.

Line – 195 - incorrect ref. Please give the ref of the two authors quoted.

Discussion needs to be re-written in line with the aim/objective of the study .
