SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	About the causation of overweight and obesity: Mange relevant perspectives have n Been described. Meanwhile the psychosocial determinants are not described at all. The methods part is very head to read. Making minor parts would help. All the interview parts have been mentioned but where are the results of these? Better description of which questionnaires have been used? How have the scoring been mad? Only two tables are overall presented- there must be more specific results? The recruitment of the participants is a bit hard to understand. Better description is needed to ensure that the 500 participants are representative for the 3 regions. Perhaps a flowchart? Otherwise the results can not be used with a god validation	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	In general a very interesting and relevant paper. About the causation of overweight and obesity: Mange relevant perspectives have n Been described.
