SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	One of the critically important concepts to the use of quinine and other related products is the difference between salt and base. As the authors have used a tablet of quinine sulphate in order to produce their quinine portion of their cocktails, they need to be sure that they state the dosage in either salt or (preferably) base. It should be noted that 100mg of base = 121mg of quinine sulphate.	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	It is important to consider the development of new drug combinations in the world of malaria as the parasite is getting ahead of us at every turn. Ciproflox has been considered and tried previously, but only as related to single drug therapy (at least as reported in the literature – multiple attempts have been made in programs throughout the world, but not reported).
