

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	2013_IJTDH_5864
Title of the Manuscript:	Increased High Density Lipoprotein Cholesterol and Total Cholesterol Levels in Traders with Metabolic Syndrome in an Apparently Healthy Nigerian Population

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
My only recommendation will be to try to avoid using multiple digits and round out percentages. It reads better so for example instead of "high BP were more frequent MSC representing 70.2%, 63.1% and 47.9% while FPG and TG were less frequent representing 11.2% and 2.2% " I would do high BP were more frequent MSC representing 70%, 63% and 48% while FPG and TG were less frequent representing 11% and 2% of traders respectively. Clinically makes more sense and it is easy to follow specially when you have so many variables. I would do it for all the values across the manuscript.
