SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Line 50. IUDs are effective anytime in the cycle if a high sensitivity pregnancy test is normal. See Turok et al doi:10.1093/humrep/det330	I had read the study of Turok before but I found it has many limitations: it is a secondary data analysis; the number of concerned cases is small. So, I maintain what has been proven and recommended up to now. Physiologically, after two weeks of conception, the effect is fetal death and not prevention. The effectiveness here concerns only the inhibition of getting pregnant after an intercourse and not for regular contraception.
<u>Minor</u> REVISION comments	Define all abbreviations-what is KAT line 94 Line 160-what is a "collier".	This is an error; instead KAP Collier was reported as that by respondents but it is CycleBeads or necklace contraceptive.
<u>Optional/General</u> comments	The English does not read well but is not really incorrect. The article requires modification to make it easier to read. The literature has many similar type articles. It will not appeal to readers if the style is complicated.	Improvement has been made
