SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Tables 2 and 3 are superfluous because except of association of anorexia with typhoid no significant association was found. Non significant relationships may be just commented. Using zero before one-digit numbers could be unified in all manuscript, for example line 165 vs. 206. The same for using zero before decimal point in P levels (Table 1). Double brackets in reference 19 on line 226.	We will like to maintain the tables because information can quickly be appreciated in a tabular form at a glance and this saves time. Using a zero before one digit has been unified in the manuscript. This has also been done in table 1. Double bracket has been removed on line 226.
<u>Optional/General</u> comments	In my opinion the manuscript was well prepared and represents a good job.
