SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. The paper is well written but it is too long and too difficult for most of the readers (the authors need to shrink the historic part of the paper and try to transform some informations in a table). 2. Some words are misspelled probably for typewriting errors, 3. Some pictures are not useful in the comprehension of the text and may diverge reader attention. 4. Try to reduce some repeated informations and to enlarge informations in primary care and treatment.	We have streamlined the article in such a way to cover your observations. (1) We deleted one of the pictures (2) Me moved the picture out of the text to last pages as supplementary (3) We have re-phrased the topic in order to gain necessary scope (4) We have corrected all grammatical errors (5) We also restructured the entire manuscript right from abstract to the recommendations Thank you sir/ madam
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	Good paper in a very little group of cases in the western world but interesting for its cross considerations with ebola viruses
