SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	No need to put PLATE 1: Lemna solid waste dumpsite. we know all how the waste seem. No need PLATE 2: too. You can explain. 559 line needs changes 1 punto between sentences is enough. Some statistics about costing on people and governments can be added. Which illnesses are done by these bacteria.	➤ I have expunged plate 1 as its explanation is already captured in the opening paragraph of discussion. ➤ I chose to differ in plate 2 that depicts in pictures how other researchers can easily use the same procedure to undertake similar research or replicate the same. It is my original methodology for leachate sampling and wish to make it public to the community of researchers in this area as it seemed more efficient than other methods. I will only change the numbering to plate 1 since I have expunged the initial plate. ➤ Line 449-508 did actually capture the diseases caused by the proliferation of the isolated organisms. Every other correction/input has been done effectively
<u>Optional/General</u> comments
