SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	- Please discuss the paper from Scicchitano P et al. Cardiology and Angiology: An International Journal, ISSN: 2347-520X, Vol.: 3, Issue.: 4 - A multivariate regression model should be provided in order to evaluate the role of confounding factors on results. - Were the group randomized to treatment? This is not clear. - Please revise the English of the text due to some typos.	Many developing countries including Nigeria are not following the European guideline for management of hypertension. This study has simply compared the common and popular available regiment for management of hypertension in our population. Hence, discussing European Guideline in the context of our study may not be appropriate. It is also not possible to discuss all available papers on this subject. Multivariate analysis does not fall within the scope and aim of this study. The groups were randomized by randomly selecting a number to place the patient into corresponding treatment group. Now clearly stated in the manuscript . Manuscript edited to take care of typos
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
