SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	- In table 1, row totals do not match the numbers given in respective columns. Please check the numbers. It may be possible that few numbers were not classified as suspected, probable or confirmed. If this is the case, then there should be a column showing cases which were "undefined". E.g. in first row total of males is 1447 but total of suspected, probable and confirmed is 1438. This pattern is same in each category total in this table. This should be checked. - A footnote in table 1 should be included to explain the abbreviations and explaining the "others" in race category as these numbers are very high for each group of patients.	
<u>Minor</u> REVISION comments	1. Word LMIC written in title was not elaborated in text (methodology or introduction), therefore it would be difficult to be decoded by readers. It is suggested that either complete name be written in title or if issue with space, it could be explained or 'introduce' in methodology section or within introduction. 2. There are number of places where words are not formatted adequately, 'no space between separate words' e.g. at line 124, 125,208, etc. Please proof	

SDI Review Form 1.6

	read manuscript to correct these. 3. Use of word “thought” is a typo at line 260. You wanted to write ‘though’. Please correct it. 4. Abbreviation ‘RGD’ at line 81 would be difficult to be decoded by readers so please write it in full. 5. A footnote should be included in Table 3 to explain the abbreviations used in table.	
<u>Optional/General</u> comments	• Overall very well conducted study and properly written manuscript except that study is limited to one hospital, so would lack external validity. Statistical analysis was done adequate.. • There is no need to give separate headings for case definitions and data analysis and these can be combined within methodology. • Authors could include a section acknowledging the help of people in study and declare the conflict of interest in study.
