SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1. In the introduction section, it is important to remark issues such as access to health services, infrastructure and cultural aspects (if there are religious aspects on the cleanliness of the hands or staff, using water or earth) in the study group. 2. At the foot of the Table 2 authors should show if statistical differences were found as well the statistical method used for comparison. 3. In the Figure 2, authors should use bars in 2D graph instead of cones in 3D graph. I think that the suggested change of graph should state clearly the results explained in the manuscript. Authors should remove old references and replace them by new references.	
Minor REVISION comments		
Optional/General comments
