PART 2: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	1. The logicity of this paper is not very appropriate, the authors should be rearranged especially for Part 3. RESULTS AND DISCUSSION. 2. It seems too simple of the description of Part 3.6 and Part 3.7, the authors should describe the kinetic studies and characterisation of the product in detail. For example, FTIR is not very enough for the qualitative characterization of product.	1. The whole section RESULT AND DISCUSSION has been rearranged. 2. Part 3.6 and 3.7 have been revised. NMR studies have been incorporated in part 3.7. The changes have been highlighted in yellow in the revised manuscript.
<u>Minor</u> REVISION comments	The usage of English may be enhanced.	Needful done.
<u>Optional/General</u> comments
