

### **Editorial Comments:**

The manuscript after the reviewers comments were responded by the authors is suitable for publication however I have 3 minor revision comments to be done by the authors before the final approval for publication

- 1) The last paragraph in the introduction to be shifted for the setting in the methodology, where the university could be explained, but the data regarding the university is not needed in the article except the students number and having students from all gulf area i.e. teaching curriculum and learning in English language and integrated system of teaching is not required neither in the introduction nor in the methodology.
- 2) Ethical consideration to conduct the research to be shifted to last section in the methodology
- 3) What was the power of sample size estimation in this manuscript? Why the authors used 1-4 stage students not all the students of the 6 stages college?

### **Authors' Feedback:**

- 1) University info was put on purpose in the introduction to explain the rationale of the target population. However, the extra information was removed accordingly.
- 2) Ethical consideration paragraph was put in its current place according to journal's instructions.
- 3) Year 1-4 share similar schedule and spend most of their time on campus, compare to year 5 and 6 who spend their time in hospital setting.
