

SDI Review Form 1.6

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	2015_JAMPS_16393
Title of the Manuscript:	Safety Evaluation of Giant African land Snails (<i>Achachatina marginata</i>) Haemolymph on Hematological and Biochemical Parameters of Albino Rats.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This is an interesting manuscript about the Safety Evaluation of Giant African land Snails (<i>Achachatina marginata</i>) Haemolymph on Hematological and Biochemical Parameters of Albino Rats. However there are many comments and recommendations to improve the manuscript: 1. Redaction is required in some parts of the manuscript (indicated in the PDF version of the manuscript attached). 2. The text of the tables should be self-explanatory. 3. There is some missing information in the content of the tables (indicated on the PDF version of the manuscript). 4. Authors should explain in detail why did they use animals with those physical characteristics and the dose administered to the treatment groups. 5. Authors should include a study design in the manuscript 6. It is recommended that the authors seek for advisement of a statistical expertise for the proper data analysis. 7. Data analysis may are not reflecting the real findings of the study 8. If it is possible, I think authors should use updated references. 9. In general this work has relevant information about toxicity of Giant African land Snails	We have noted and effected all the corrections. The dose 2ml & 4ml/kg were derived from literature. Eg Jummai and Okoli (2013) reported therapeutic activity of the haemolymph at dose of 2ml & 4ml/kg. Fred-Jaiyesimi and Awobajo Olaide have also reported the BIOCHEMICAL AND HISTOPATHOLOGICAL EFFECT OF <i>ACHACHATINA MARGINATA</i> at a dose of 1ml/kg Data presented in this article are statistically analzed data using spss version 16(stated in the manuscript)

SDI Review Form 1.6

	(Achachatina marginata) Haemolymph in Albino Rats, however the manuscript should not be published in the current form. There are ethical issues in this manuscript
