

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_JAMPS_19036
Title of the Manuscript:	Pilot study of photoallergic reactions to UV filters among dental professionals
Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Authors corrected the paper. The exclusion criteria shouldn't be removed, but just be reallocated together the inclusion criteria. Analyzing the tables, it appears that the skin photopatches were also applied on the skin of the dental professionals, but the methodology only mentions patients. The recruitment of the patients is not still clear: how was performed the randomization, how was identified patients without exposure to dental materials?	Thanks for the valuable final remarks. According to the recommendations, the exclusion criteria were reallocated together the inclusion criteria – lines 40-45. Concerning the randomization of the patients, they constituted a control group of individuals of age above 18 years without occupational exposure to dental materials. We included patients with history for previous treatment with treatment with UV-filters containing dental materials (e.g. with dental composites), wishing to participate in the study. In the methodology, we clearly indicated that all participants were patch tested (line 59).
