

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	2015_JCTI_17286
Title of the Manuscript:	Aggressive Recurrent Giant Cell Tumor of Distal Ulna with Pulmonary Metastasis: A Case Report
Type of Article:	Case Study

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
English must be revised for readers benefit by professional rewiever. The reason why you did not perform chemotherapy cannot be the tumor theoretical benignancy because adjuvant therapies are well described for this kind of tumor in the literature.	We have corrected the grammatical errors We did not give chemotherapy because it was not commonly performed for this benign tumour in our hospital.]. We regarded GCT as a benign lesion and the metastases was multiple involving both lungs and also the metastases had been asymptomatic for long periods. Treatment is not always mandatory because in some cases, pulmonary metastases had regressed without treatment. However, because of poor outcome in this patient, For better outcome, chemotherapy or lung radiotherapy is considered as choice of treatment for GCT of bone with pulmonary metastasis.
