

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Ophthalmology Research: An international Journal
Manuscript Number:	2013_OR_5543
Title of the Manuscript:	Utilization of eye care services among Ghanaian elderly population: Evidence from a peri-urban community in Ghana

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<ol style="list-style-type: none"> The authors have responses to all my previous comments. I appreciate their adjustments with the paper. However, I do not agree with the author that regression analysis should only be used for prediction. Regression analysis simply provides adjusted estimates, and if the authors do not wish to use regression analysis, I think it is fine but they should nevertheless provide adjusted estimates without using a regression. I still think some of the tables are unnecessary. For example, Table 1 and Table 2 can be combined, even merged with Table 6. The adjusted paper has a lot of English grammatical errors and I would suggest some editing before publication. 	<p>Authors thank reviewer for his useful comments which helped to improve the paper. It was not our intention to submit that regression analysis is only used for prediction. we only sought to say that chi square analysis as used fit our intention.</p> <p>Authors agree with reviewer. Table 1 have been deleted as the same information is provided for by table 2 dedicated to demographic background and table 6.</p> <p>Authors have proof read the paper.</p>
