SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1- Please clarify the setting of this experimental research. 2- Please clarify in details the instruments used in subject and method section.	1. The experiment was performed on an enucleated porcine eye model which has been described before for assessing cataract, glaucoma and corneal surgery. This has been alluded to in the Abstract and explored in more detail in the Discussion. 2. We have added information on the cannula, Balanced Salt Solution (BSS) and silicone tubing used, and now feel that the details are complete.
<u>Minor</u> REVISION comments	1- Discussion is not sufficient.	We have rechecked the Discussion and feel that, although compact, it does encompass all the findings and relevant discussions. However, we will endeavour to add to the Discussion if more specific clarification is needed.
<u>Optional/General</u> comments	Some typographical errors should be corrected.	The spelling and grammar have been rechecked by 2 native English speakers and no errors are detected.
