SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	ABSTRACT: This seems short and did not portray any information warranting any conclusion to be made. Author should rewrite this section to really guide the reader to a reasonable conclusion INTRODUCTION: Author should first explain what collodion baby is. Then classify ichthiosis before narrowing down to Lamella ichthyosis. See an article written by Chinawa et al on collodion baby syndrome INTRODUCTION: Line 19: This should be referenced INTRODUCTION: Author should highlight why this case report is rare. is this the first time non surgical methods proved successful in your setting. Author should ascertain if there is any history of any of the sibs with collodion baby syndrome? Was histology done for this patient? What are surgical ways of managing this case? At least, this should be highlighted briefly in introduction DISCUSSION: Please talk more of your patient in relation to some literature search. Discussion should be rewritten to reflect this References did not follow Vancouver. This should be rewritten in its whole entirety	DONE To be done DONE Nil family history Not done (no histopathologist at our centre) This was stated in the introduction (lines 32-33) Done in according to Vancouver
<u>Minor</u> REVISION comments	CASE REPORT: Recast the sentence in line 40 and 41	Done

SDI Review Form 1.6

	Why did the author commence this child on oral antibiotics?	The systemic antibiotic was commenced by the paediatrician as a form of preventive measure because the parent applied local concoction on the neonate umbilical cord before presentation.
<u>Optional/General</u> comments	Please author should address the comments above
