SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	You can start introduction with collodion baby rather than lamellar ichthyosis as you have not proved your case as lamellar ichthyosis by skin biopsy. Mention few causes of collodion membrane and causes of congenital ectropion Mention how many studies carried out with non surgical methods of treating ectropion and how far it's better than surgical methods. Better add it in percentage Please provide better images of after treatment How unique is your case study – mention in conclusion	
<u>Minor</u> REVISION comments	Abstract too short. Doesn't provide any information. If possible u can change the title as- non surgical management of bilateral ectropion with collodion membrane in a newborn rather than using 5 hour old in title.	
<u>Optional/General</u> comments	Was consent taken while taking photographs of newborn?
