

SDI Review Form 1.6

Journal Name:	Ophthalmology Research: An international Journal
Manuscript Number:	2013_OR_7034
Title of the Manuscript:	The Patient's Viewpoint of Cataract and Detached Retina Surgeries
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The author described the medical history of cataract and retinal detachment surgeries. He undertook a dozen eye surgeries and suffered with strabismus, diplopia, pain, and visual loss. He had been also ignored his complaints of pain by physician. Based on proper description and excellent figures, he concluded that the reader should judge the appropriateness of the conclusion, "The optometric and ophthalmologic medical community had done a disservice to his patient." The physician should re-recognize the present possible status such as ignoring patients' complaint, lack of direct communication between doctors and/or optometrists. So this manuscript is important. However, there are major problems as scientific paper. The all symptoms such as diplopia, pain, and visual loss of patient are not "rare" after complicated case. Multiple surgeries including vitrectomy and sclera buckling for retinal detachment after complicated cataract surgery can cause such complaint. The pain is not rare symptom. The ophthalmologist usually understand well, whether they explain it to their patients.	

SDI Review Form 1.6

	To conclude, the author should describe proper reference about the incidence of complication of cataract surgery, the success rate of retinal detachment surgery, the rate of dilpopia/strabismus after sclera buckling, macular edema after intraocular surgery and the rate of pain. I believe the objective analysis and discussion is needed for scientific paper. If the author describes his conclusion, proper or theoretical discussion is absolutely needed.	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
