SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1-Please consider the study design clearly. 2-Please consider in the discussion the small number of the primary congenital glaucoma included as a limitation for the study. 3-Please clarify in details the inclusion and exclusion criteria.	1-Please refer to the yellow highlighted paragraph in "Patients and Methods" 2- the small number of cases with primary congenital glaucoma(PCG) can be justified by two reasons,1st this study is a collective overview on all cases in which Ologen was used not specifically for PCG , 2nd these cases are specifically rare and unfortunately a very few number of cases were available with big difficulty in scheduling the follow up visits with the parents living usually far from our center (added in the discussion) 3- I added inclusion and exclusion criteria in the revised paper in patients and methods section and highlighted in yellow
<u>Minor</u> REVISION comments	1- The reference of the criteria of success. 2- Discussion is not enough.	1-criteria of success are corrected according to that frequently found in the literature e.g.(reference 9-11) 2-I added few sentences to explain the role of Na hyaluronate and the "floating" CM (Highlighted in yellow)
<u>Optional/General</u> comments	Some typographical and language errors should be considered.	I revised all errors as much as I could in the revised paper, typographical errors are mainly due to some problem in Microsoft Word Formatting.
