

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Ophthalmology Research: An International Journal
Manuscript Number:	2015_OR_18395
Title of the Manuscript:	CONJUNCTIVAL FOREIGN BODY A RARE PRESENTATION.
Type of Article:	Case Report

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
When submitting your revised manuscript, please highlight all the changes within the new document by using the track changes mode in MS Word or by using bold or colored text. According to the authors guidelines of this journal, ABSTRACT (not more than 250 words) of the Case reports should have the following sections: Aims, Presentation of Case, Discussion and Conclusion. Please correct after checking http://www.sciencedomain.org/page.php?id=general-guideline-for-authors Please check the keywords (conjunctiiva with double i) and about 4-8 keywords should be given. The authors have answered the questions regarding the follow-up after wooden removal at "discussion" section and it should be located on "case report section". According to the paper, all inflammatory signs and conjunctival granulation markedly reduced within one week. Where is the clinical picture that proves this sentence for the readers? All therapeutic agents should be mentioned by their generic names with the following information in parentheses: trade name, manufacturer's name, city, state and country of origin. For example: "Then he was treated by antibiotic eye drops..." which one? "Under topical anaesthesia..." which one? The authors have enriched their article by discussing the possible mechanisms involved in the pedunculated polyp-like growth. The authors have written in their conclusion that ophthalmologists should include foreign body granuloma among the differential diagnosis of an intraorbital mass. I did not understand why they have preferred the term 'intraorbital' against "conjunctival". References are the major problem that persisted. Citations must be listed at the end of the manuscript and numbered in the order that they appear in the text SINCE IN THE INTRODUCTION. Every reference referred in the text must also present in the reference list and vice versa. In the text, citations should be indicated by the reference number in brackets. References should be in accordance with the format suggested by the International Committee of Medical Journal Editors (ICMJE). Check http://www.nlm.nih.gov/bsd/uniform_requirements.html. The titles of the journals should be abbreviated according to the style provided by the List of Journal Indexed in Index Medicus of the National Library of Medicine. Check http://www.ncbi.nlm.nih.gov/nlmcatalog/journals	All the changes are highlighted in yellow colour. Now the abstract is less than 200 words. Aim, presentation of case, discussion and conclusion added. Key word added Corrected Thank you sir Corrected. corrected
