

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Ophthalmology Research: An International Journal
Manuscript Number:	2015_OR_18637
Title of the Manuscript:	Ocular manifestations in Rheumatoid Arthritis
New Title:	Ocular Involvement in Patients with Rheumatoid Arthritis

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The paper is more fluid nevertheless it does not addresses major revisions requested. The Authors stated that they have performed others tests but the only one analyzed is the shirmer test. Moreover this test has a wide variation in interpretation that results are confusing (only 13% of patients has corneal damage).	Thank you I think that we have explained. We chose the Schirmer test even though the Schirmer test is used as one of the six major criteria for Sjögren's syndrome diagnosis based on the American-European Consensus Criteria for Sjögren's syndrome, so it was not necessary to use other tests such as neither lissamine green or bengale rose coloration We have performed only tow tests : schirmer test for sjogren and slit lamp microscopic examination to distinguished episcleritis and scleritis, however we have explained that the diagnosis of episcleritis and scleritis is mainly clinical. Thank you.
