

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Physical Review & Research International
Manuscript Number:	MS: 2012/PRRI/2399
Title of the Manuscript:	The classical mechanics from the quantum equation.

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>line 34: remove 'unpopular' as the author proceeds to describe how useful it is.</p> <p>"The interest for the QHA had never interrupted, resulting useful in the numerical solution of the time-dependent Schrödinger equation [13], and had led to a number of papers and textbooks bringing original contributions to the comprehension of quantum dynamics [14-16] in problem whose scale is larger that one of small atoms such as chromophore-protein complexes and semi-conducting polymers that are dynamically submitted to environmental fluctuations." References are fine, but rewrite this sentence to make it more readable</p> <p>line 64: "the wave function modulus squared (WFMS)" is often called probability density</p> <p>line 162: fix typesetting of the Eq.</p> <p>Eq. 1: does the dot mean d/dt, the full time derivative? (in contrast to the partial time-derivative)</p> <p>line 268: "finite can steam out from" should be "stem"</p>	<p>The adjective 'unpopular' has been removed.</p> <p>The sentence (line 40) has been made more readable.</p> <p>The wording has been made uniform through the text.</p> <p>typesetting fixed in line 162.</p> <p>The dot is used to mean d/dt as given byeq. 8.6.10 and 8.6.11 in ref. [27]</p> <p>The sentence containing the verb has been eliminated.</p>
