

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Physical Review & Research International
Manuscript Number:	2013_PRR1_4006
Title of the Manuscript:	Structural Characteristic of Bamboo and Rattan Cane Reinforced Concrete Struts

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<ol style="list-style-type: none">1) Compression test for bamboo samples can be made in compression machine taking 1' long or less bamboo samples cut from and bamboo tree. In such case buckling effect may not harm the process.2) Care should be taken for "REFERENCE"3) Compression test of unreinforced concrete will be helpful to understand more precisely the effect of bamboo and rattan in concrete.4) What are the age of bamboo and rattan used in this test?	<ol style="list-style-type: none">1. Some recent references of compressive test in bamboo have been cited.2. Corrected3. There is on going research in this area, hopefully this will be well taken care of in future, research.4. The average age off the bamboo and Rattan cane used was less than 40 days after harvesting.
