

SDI Review Form 1.6

Journal Name:	Physical Review & Research International
Manuscript Number:	2013_PRRI_6837
Title of the Manuscript:	Geometric Phase, Curvature, and the Monodromy Group
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	More details although brief on results obtained should be reflected on abstract. Separate content on results and discussion should be provided. A separate content on conclusion should also be provided. A MATLAB code can be used to generate curves which can be discussed and hence improve on the content under results and discussion.	I provided the sections. I have downloaded MATLAB, and have even been contacted by one of their sales representatives. I don't have experience with the program, and I don't think I could get the necessary help to write such programs in a limited amount of time. It seems they give me a 30 day trial period after which I must purchase it. I have never worked with numerical solutions to differential equations or computer graphics.
<u>Minor</u> REVISION comments	The word point has been repeated in line page 17.	Thanks.
<u>Optional/General</u> comments	Equation (48) can be solved directly by multiplying it with r^2 and then making the transformation $r = e^t$.	Isn't it the same as $rd/dr = d/dt$?
