

## SDI FINAL EVALUATION FORM 1.1

### PART 1:

Journal Name:	<a href="#">Physical Science International Journal</a>
Manuscript Number:	2014_PSIJ_9748
Title of the Manuscript:	Quiet time foF2 variation at Ouagadougou station and comparison with TIEGCM and IRI-2012 predictions for years 1985 and 1990

### PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>I still insist that this work is poorly written, the author is advised to take time to read the work over before pushing it to the Editor, there are no spaces between words making this very difficult to read. For example, in line 32 "concernsF2" in line 33 "allsectors" in line 49 "equatorialionospheric" this is common throughout the text. I am unable to understand the difference in (1) and [1] as seen below, (1)in the study of Adeniyi and Adimula [1], (1)The works of Abdu et al.[3], (2) Bertoni et al. [4], (2) Ouattara [2] I suggest the introduction be rewritten to be more meaningful.</p> <p>The abstract is to be rewritten to be sharp.</p> <p>If this minor corrections are effected and the abstract rewritten this paper should pass</p>
