

**SDI Review Form 1.6**

Journal Name:	<a href="#">Physical Science International Journal</a>
Manuscript Number:	2015_PSIJ_16070
Title of the Manuscript:	COMBINED EFFECTS OF HALL CURRENT AND MAGNETIC FIELD ON UNSTEADY FLOW PAST SEMI-INFINITE VERTICAL PLATE WITH THERMAL RADIATION AND HEAT SOURCE
Type of the Article	Original Research Article

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b><u>Compulsory</u></b> REVISION comments	<b>NIL</b>	
<b><u>Minor</u></b> REVISION comments	<p>Many researchers done similar type of work at different channels. Infinite boundary condition case is wortful compared with finite study.</p> <p>It is appreciable if authors should have compare the results for finite and infinite boundary cases.</p>	<p>The present problem is an extension of the work, carried out by Srihari &amp; Srinivasreddy [29],in which the effect of hall current is ignored. So in the present paper the effect of hall current taken in to account.</p> <p>In order to compare the present results with previous findings [29] in better manner, an infinite boundary condition in the problem is converted to the case of finite condition. The comparisons in all the cases shown a good agreement between the results.</p> <p>We could not compare our present results with the case of infinite boundary condition as in the previous published work [29], the results were obtained in the case of finite boundary condition only.</p>
<b><u>Optional/General</u></b> comments
