

### **Editor's Comment:**

I am confident that this paper should eventually be published, as the journal has stated out its policy of not rejecting a submission based solely on the lack of originality. So this should clearly be reported to the author. However, if other researchers have worked on the field previously and obtained comparable results, they should be quoted.

The author should be disclosed the (possibly edited, to remove unsubstantiated claims of falsity on the author's part) content of the email from Dr. EZ sent on Sat, May 30, 2015 at 2:51 PM to the Managing Editor and ask him to comment on these four references. If they are relevant, they should be cited in the paper and discussed in relation to the method proposed and results obtained in the present submission. If I am not mistaken, these are the references that the author was asking to receive from the referee when he wrote 'why the reviewer did not mention a few of them as example?'.
